Computer Generated Imagery

VIZTECH

CGI PROCESS

1 Details

Before we get started we will need a list of the products, group settings, and room settings you need built in CGI. We will also need detailed drawings or sketches of each product with dimensions inlcuded.

2 Samples

We can build standard products with standard wood species and OCS or FinishWorks stains. For more complex products (table pedestals for example) or nonstandard wood and stains we may require a sample to be shipped to our office.

3 Final Approval

We will deliver proofs of your products for any corrections. Once your final approval has been given we can send the product pictures to your designer or send you a USB drive with the files.
